

BIS.SPEC / BIDDER DESK

Technical offer specimen

Fe 500D reinforcement steel

SIMULATED SIH DEMO — NOT A REAL BID

Fictional supplier and incomplete evidence. Do not submit to any purchaser.

Bid-readiness practice specimen · English text PDF · 29 September 2026

1 Offer summary

Specimen ID: SIH-DEM0-BID-001 (fictional, not a bid or tender ID)

Illustrative supplier: Demo Steelworks (fictional)

Offered item: Fe 500D high-strength deformed bars for concrete reinforcement

Commercial schedule / purchaser / closing date: Not supplied — no live tender is represented.

Purpose. This mock technical offer is separate from the Officer tender-draft PDF. It is intentionally incomplete so the Bidder workspace can show a useful readiness result and evidence gaps.

2 Product statement

We propose to supply Fe 500D TMT reinforcement bars for a hypothetical civil-work package. The product brochure and a sample delivery note are included in this practice description. Actual manufacturer, mill, heat numbers, bar dimensions and quantities are not identified.

For this software-screening exercise, the offer refers to IS 1786:2008. The edition and scope are not independently verified here; confirm current official requirements for the actual product and procurement before use.

3 Evidence included in this specimen

- Product brochure and generic manufacturer declaration.
- Illustrative dispatch-note format without a real consignment, mill or batch number.
- A quality contact placeholder; no verified organization or contact details are provided.

4 Evidence not submitted

- **Tensile and bend evidence:** no heat-wise tensile test report, elongation result, bend result or rebend result is attached.
- **Heat chemistry and weldability:** no heat-analysis report, chemical composition or carbon-equivalent report is attached.
- **Traceability:** no manufacturer identity, heat number, batch-to-bundle linkage or lot-specific mill test certificate is supplied.
- **Certification:** no BIS licence number, CM/L evidence or product-scope confirmation is supplied. The bidder must verify whether any current QCO applies to the exact product before making a certification claim.
- **Tender-specific commitments:** no delivery schedule, eligibility evidence, quantity schedule, price, warranty commitment or signed declaration is supplied.

Do not treat this as a compliant offer. Missing evidence is stated deliberately for the software demonstration. No product, supplier, certificate, licence or test result in this file is genuine or verified.

5 Bidder preparation checklist

Before responding to an actual procurement notice, replace this specimen with a controlled technical submission and check the notice for the precise product scope, grade, dimensions, test method, eligibility, submission format and due date. Attach genuine model- and lot-specific reports. Confirm standard editions and certification requirements through official BIS sources and the issuing authority's tender documents.

6 Using this sample in BIS.SPEC

Sign in to the **Bidder / Contractor** demo workspace, upload this PDF, then choose **Check against BIS standards**. Expected focus: a match related to Fe 500D reinforcement, extracted product evidence, a Bidder readiness view with incomplete/partial checks and document prompts, and a Bidder upload-history record. If the same browser is later switched to the Officer workspace, the upload log also appears in Officer history as an unverified demo analysis.

Important limitation. BIS.SPEC is a demonstration screening aid, not an official BIS source, engineering approval, legal opinion, certification decision or procurement record. Do not upload confidential or personal information to this public demonstration. Verify live notices, standards editions and QCO applicability at official sources.
