

BIS.SPEC / OFFICER DESK

Tender technical specification

TMT reinforcement steel · Fe 500D

SIMULATED SIH DEMO — NOT AN OFFICIAL TENDER

Fictional scenario. Do not submit as a bid or rely on it for procurement.

Procurement screening specimen · English text PDF · 29 September 2026

1 Document control

Specimen ID: SIH-DEM0-OFF-001 (fictional, not a tender number)

Illustrative purchaser: Public Works Review Unit (fictional)

Package: Supply of high-strength deformed steel bars for concrete reinforcement

Schedule / value / closing date: Not assigned — this is not a live procurement opportunity.

Purpose. This sample gives the Officer workspace a readable tender-draft PDF to upload. It is designed to exercise document extraction, standards matching, clause screening and Officer-side history. It is not issued by any authority.

2 Scope of supply

Supply Fe 500D high-strength deformed steel bars and wires for reinforced concrete in the diameters, cut lengths and quantities that would be listed in a real schedule of requirements. All supplied lots must be identifiable by manufacturer, grade, diameter, heat or batch, and delivery record. Quantities and delivery locations are intentionally omitted from this practice file.

3 Technical requirements

- The offered reinforcement grade shall be **Fe 500D** and the material shall conform to **IS 1786:2008**, subject to independent verification of the current edition, amendments and product scope.
- Minimum yield strength: **500 MPa**. Elongation shall be not less than **16%** for this illustrative acceptance schedule.
- Carbon-equivalent value shall not exceed **0.53%**; the heat-analysis carbon limit used in this specimen is **0.25%**.
- Each heat or batch shall be traceable from the manufacturer's test certificate to delivery challan and supplied bundle markings.
- Values above are controlled demo inputs, not an authoritative reproduction of an Indian Standard. Applicable grade tables, sampling, tolerances and amendments must be checked against official publications by a qualified reviewer.

4 Inspection and evidence schedule

The draft asks the bidder to include the following evidence with the relevant bid or delivery lot, where applicable:

- Heat-wise mill test certificate recording grade, yield strength, tensile strength, elongation, bend and rebend results.
- Chemical analysis showing the heat chemistry and calculated carbon equivalent.
- Batch identification, bundle marking and traceability records.
- Model-, product- and location-specific BIS licence evidence **only where the current applicable QCO and certification scheme require it**; verify coverage with BIS before treating this as mandatory.
- A quality assurance plan, sampling plan, inspection record and accredited laboratory reports for any tender-stated tests.

Officer review prompts. Confirm standard edition and product scope; verify the applicable grade table and test methods; state the acceptance and sampling rules; check current QCO/licence applicability through official notices; and ensure no design requirement is contradicted by the procurement specification.

5 Suggested acceptance workflow

1. Review the draft requirement and resolve ambiguous grade, dimensions and quantity fields before publication.
2. Compare each delivered bundle's markings and heat number with its mill certificate and dispatch record.
3. Check the specified tensile, elongation, bend/rebend and chemistry results against the applicable official requirements.
4. Record any independent sampling or laboratory test, deviation, corrective action and final disposition in the purchaser's controlled procurement system.

6 Using this sample in BIS.SPEC

Sign in to the **Buyer / Officer** demo workspace, upload this PDF, then choose **Check against BIS standards**. Expected focus: a strong reference match to **IS 1786:2008**, extraction of Fe 500D / strength / elongation / test-evidence terms, a clause-level review, an Officer audit-report action, and an Officer history entry with the document name and concise analysis details.

Important limitation. BIS.SPEC is a demonstration screening aid, not an official BIS source, engineering approval, legal opinion, certification decision or procurement record. Do not upload confidential or personal information to this public demonstration. Verify live notices, standards editions and QCO applicability at official sources.
